

# LAPTOP / DESKTOP DISK ENCRYPTION

DISK ENCRYPTION SOLUTIONS FOR DATA CONFIDENTIALITY

## Laptop (or Desktop) Disk Encryption

All of us know people who have had office or auto thefts where computers have been stolen. Keeping your proprietary data and customer information confidential is a significant concern. There are also liability issues to be considered when storing customer information.

Disk encryption has proven to be the most secure method of protecting data stored on a desktop or laptop computer. We can protect your disk's data by using passwords, USB keys, biometric devices, or combinations of these.

A disk encryption solution has many technical aspects that need to be evaluated, including:

- data recovery options, should disk corruption or drive failure occur
- encryption key management
- security policy enforcement

Let ATS put these concerns at rest by assisting in identifying your security risk and providing a disk encryption solution that assures the data can only be used by authorized and authenticated users.

Disk encryption software solutions start at \$299.00, per system, including labor.
