

ATS MANAGED FIREWALL SERVICES

SONICWALL FIREWALL AS MANAGED SERVICE

Managed Firewall Services

Being connected 24/7 is what your customers expect, but the Internet is a wild and scary place. Bad guys are out there just looking for you to miss something, just a crack in your armor that they can penetrate. Your Internet firewall is the front line of defense at protecting your servers and workstations from attacks from the outside.

Firewalls do much more today than they did just two years ago. They now perform Anti-Virus filtering, Spyware filtering, Web Content filtering, usage reports and more. Are you getting the protection your network system deserves? Are you missing important usage data that tells you how your Internet connection is being used?

ATS can provide a properly installed SonicWALL Internet protection system that will provide the highest protection levels available. Have us provide installation, monitoring, reporting, licensing and configuration for as little as \$75 per month.

No setup fees! No minimum contract length!

Assured
