

SECURE REMOTE ACCESS

SONICWALL SSL-VPN SECURE REMOTE ACCESS

Simple and Secure Remote Access

Many of us have experienced the benefit of accessing your office computer and servers from a remote location. In fact, Microsoft made this even easier and desirable by making Remote Desktop a part of Windows XP Pro. Remote connectivity gives us the opportunity to spend more time out of the office and still meet the timely demands of our customers and colleagues.

There are security and configuration challenges with most solutions today. VPN's can be difficult to configure and don't always work in hotels, and Remote Desktop, while easy to use, can leave one concerned because of the Internet visibility and security.

As you know, email also has its limitations, it is not encrypted and large file attachments often fail. How about giving employees, customers and vendors the ability to upload and download files from you server, all encrypted and secured, all through the simplicity of an SSL encrypted web browser. Why, all of us know how to do that!

Make all of your dreams come true* with a SonicWall SSL-VPN solution. This device, in combination with a good firewall device, can provide a great solution to all of these problems. Starting at just \$550, this trick little device will simplify your remote access issues, and as we know, simpler is usually better. You won't complain about the fact that the security of your network is also enhanced.

*Some limitations apply
